SUMMARY

QA Engineer with one year of experience testing a live fintech application on Android, iOS, web and USSD in an Agile team. Run functional, regression, API, smoke and SIT tests, and automate repeat smoke and SIT cases. Part of production releases across 10+ sprints with no major issues after release. Work with Selenium, Appium, TestNG, Postman, RestAssured and Maven, and track defects in Jira.

TECHNICAL SKILLS

Testing Types: Manual, Functional, Regression, UAT, Release Sign-off, Smoke & Sanity, Exploratory, Integration (SIT), Black Box, Cross-Browser, Mobile (Android & iOS), USSD

Automation & Tools: Selenium WebDriver, Appium, TestNG, Cypress, LambdaTest, Postman, RestAssured, Maven, Git, Browser DevTools, VS Code

Languages & Databases: Java, Python, SQL, PostgreSQL, JavaScript

Process & Collaboration: STLC, SDLC, Test Case Creation, Defect Life Cycle, Requirement Analysis, Sprint & Release Verification, Jira, Confluence, Agile/Scrum, Slack

Cloud & CI/CD: AWS, Microsoft Azure, CI/CD (exposure)

AI Tools: Using AI to write test cases, draft test plans, and debug automation scripts

WORK EXPERIENCE

Software Tester, Comviva Mahindra Oct 2025 – Present

Bangalore, Karnataka | Contract via Nviera Technologies

- Automated 50+ smoke and SIT cases for the Android, iOS and USSD apps, so each new build runs the scripts instead of repeating the tests manually, which cuts testing time.
- Tested the fintech mobile app on Android and iOS every sprint: functional, regression, smoke, sanity and exploratory, with test cases written from user stories.
- Tested new features from first build to release, including integration and acceptance tests, across 10+ sprints with no major issues after release.
- Checked REST APIs in Postman, covering request and response payloads, status codes and edge cases, before front-end testing.
- Logged bugs in Jira with clear steps, screenshots and logs, and worked with developers to retest fixes until they were closed.
- Used AI tools to write test cases, draft test plans and debug automation scripts, which cut the time spent on test prep.
- Investigated issues with browser DevTools, console logs and network traces, and ran sanity tests after each release.
- Took part in sprint planning, daily standups and release sign-off as part of the Agile/Scrum team.

Software Testing Intern, Senseops Tech Solutions Pvt. Ltd Feb 2025 – Sep 2025

Bangalore, Karnataka

- Manually tested in-house web applications: functional, regression and integration.
- Wrote test cases from requirement documents, ran the scenarios and reported defects to developers with clear steps to reproduce.
- Retested fixes before sign-off and worked with developers to verify and close issues.

PROJECTS

- **Library Management System** (Java, JDBC, SQL): Built a library system with user login and add, view, update and delete features. Wrote unit and integration test cases to check that data stayed consistent across modules.
- **AI-Powered Plant Health Detection System** (Python, CNN, Flask): Tested the Flask web interface of a plant disease detection model with functional and UI input scenarios.
- **Weather Forecasting Web App** (HTML, CSS, JavaScript, OpenWeather API): Checked OpenWeather API responses for accuracy and ran cross-browser functional tests on the front end.

EDUCATION

Bachelor of Engineering, Computer Science & Engineering June 2025
Visvesvaraya Technological University, Belagavi, Karnataka CGPA: 8.1/10

CERTIFICATIONS

AWS Cloud Practitioner | Microsoft Azure Fundamentals | Software Testing (Manual & Automation) | Cloud Computing (NPTEL) | Cyber Security (TCS iON & Google) | Core Java Programming | Data Science Fundamentals

LANGUAGES

English, Hindi, Kannada
